SURGICAL SITE INFECTION (SSI) PREVENTION GUIDELINE

The purpose of this guideline is to provide a comprehensive overview of the current best practices for the prevention of surgical site infections (SSIs). This guideline is intended for use by healthcare providers involved in the care of patients undergoing surgery.

This guideline is based on the most current evidence available. It is intended to be used as a reference for healthcare providers and not as a substitute for clinical judgment. The guideline is subject to change as new evidence becomes available.

The guideline is organized into several sections, including: Preoperative Care, Intraoperative Care, and Postoperative Care. Each section provides detailed information on the various interventions and measures that can be taken to reduce the risk of SSI.

The guideline is intended to be used as a reference for healthcare providers and not as a substitute for clinical judgment. The guideline is subject to change as new evidence becomes available.
